

HJ SMARTLINK™

NEXT GENERATION
LUBRICATION TECHNOLOGY

© Hans Jensen Lubricators 2022

HJ Smartlink™ takes cylinder lubrication online and presents the data you need for running an efficient engine with lower cost and reduced particle emission.

Digital lubrication platform

Data access online brings you full transparency of the lubricator performance on a number of parameters that are important when realizing the full potential of your 2-stroke engine.

The major advantage of HJ Smartlink™ is the possibility of proactive maintenance of the cylinders. This helps you optimize operation, prevent costly downtime and keep lubrication costs on the lowest level possible.

Crew challenge

Engine crews perform a wide range of tasks in today's engine room. In some cases, working conditions have even become more challenging due to a combination of new technologies and 'green' legislation. This is where HJ Smartlink™ makes the difference for crew and fleet owner.

Get a personal demo

See the platform and discover the possibilities of adding a new layer to your lubrication solution. Please contact us for arranging a convenient date and time for an online demonstration.

Remote monitoring of:

- Feed rate
- Average oil consumption
- Fuel index
- Engine load
- Engine speed RPM
- Alarms and notifications
- Route and location on a map
- API integration to other systems
