

HJ SIP SERVICE

Ensure optimum performance of your HJ SIP valves by joining our overhaul program. Benefit from specialist knowledge for correct maintenance.

Maintenance done by specialists

Clients using HJ SIP valves can ensure optimum valve performance and maximum ROI by joining our maintenance program.

Hans Jensen Lubricators provides an extra set of HJ SIP valves to the vessel as backup. After 12-15,000 hrs. of operation the original set of SIP valves are replaced by the crew using the backup set.

The used valves are then sent to HJL for overhaul. After finishing the overhaul of the used valves, HJL returns the valves to the vessel.

12-15,000 hour intervals

The recommended TBO for HJ SIP valves is 12-15,000 running hours or approx. 2 years. The service agreement period is a total of 5 years.
